PROFILE

A motivated and curious first-year Computer Science student with hands-on experience in data science, web development, and AI-based applications. Strong foundation in programming and problem-solving, with practical exposure through internships, projects, and national-level hackathons. Passionate about learning new technologies, building impactful solutions, and applying analytical thinking to real-world problems.

EXPERIENCE

Data Science Intern, Yulu Bike Rental Demand Prediction

Hyderabad, Telangana

Worked on a data science project focused on predicting bike rental demand for Yulu's urban mobility platform.

- Analyzed historical bike-sharing data to identify key factors influencing demand, including weather conditions, time of day, and special events.

Built predictive models to forecast demand and support optimized fleet management, reducing idle resources during low-demand periods.

- Derived insights to help improve customer experience by aligning bike availability with peak usage patterns.
- Contributed to business-oriented analysis aimed at enhancing operational efficiency and decision-making through data-driven insights.

EDUCATION

B. Tech, CSE, CMR Technical Campus

2025 – 2029

Current CGPA:

Kandlakoya, Hyd

Intermediate, MPC, Telangana State Residential Junior College

2023 – 2025

Percentage: 90.7%

Sarvail Choutuppal

CISCE, St. Theresa High School

2022 – 2023

Percentage: 90%

Arul Colony, HYD

SKILLS

Languages

Java, Python, C, JavaScript

Others

- Supabase
- Web Designing
- Google Cloud Services
- Exploring new technologies

Technologies

- Web Development
- Natural Language Processing

Frameworks

- React JS
- Tailwind

Tools

- GitHub
- Windows

ACHIEVEMENTS

CyberFest, CBIT, Hyderabad, CBIT, Hyderabad

07/01/2026

Secured Winner position in the Fintech/ Cyber Security Domain at Cyberfest, a National Level Hackathon held at Chaitanya Bharathi Institute of Technology.

Web Development, Ar electronics

Developed a comprehensive company portal to streamline employee management and organize organizational data, improving accessibility, efficiency, and overall workflow.

PROJECT (S)

Sentinel, React | Supabase | Tailwind | Python

Developed a sandbox platform to simulate real-world fraud scenarios on synthetic payment transaction data. Built a configurable transaction generator to model fraud patterns such as card testing, account takeover, and collusion. Designed a pluggable rule and model interface allowing teams to define and test custom fraud detection logic. Implemented performance evaluation metrics including catch rate, false positives, and latency with clear visualizations. Created a scenario editor to design, replay, and analyze evolving attack sequences over time for better fraud defense testing.

Punjunator, Python | NLP | JavaScript | HTML | CSS

Developed an AI-powered chatbot application focused on stock market education and analysis. Implemented features to explain stock market concepts, analyze market trends, and predict potential future stock movements based on available data. Integrated an investment guidance module that suggests suitable investment options while clearly explaining the reasoning behind each recommendation. Designed the chatbot with an educational focus, making complex financial insights easier to understand for beginners and learners.

Hospital Management, HTML | PHP | JS | SQL

Developed a full-stack web application that deals with various aspects of Hospital Management. Integrated online appointment scheduling, purchasing medicines, and lab tests in the online platform. Integrated functionalities for the doctor to view appointments. Integrated functionalities for the admin to add and remove doctors.

Library Management, HTML | PHP | JS | SQL

Developed a Library management website for mobile-only devices to check the availability of a book in a library and its location. Implemented search and filter functionalities for an enhanced user experience.
